# Usable Forms for the Web

Forms are an integral part of many web sites, whether they are registration forms, feedback forms, or order forms. However, forms are time consuming for the site user to fill out, and need to be implemented to be as usable as possible, otherwise they can be frustrating and annoying, spoiling the user experience. This book takes all the hassle out of implementing forms in whatever way you wish, dealing with client-side forms in HTML and Flash, client- and server-side form validation, and server-side data processing. It provides code samples fully adaptable to your own needs, along with walkthrough tutorials on how they work, and an HTML form element reference. INCLUDES: * Easy to Follow tutorials and reference on building form user interfaces with HTML and Flash * Tips to follow for designing usable forms * Client- and server-side data validation techniques using JavaScript, ASP and PHP * Server-side data processing using ASP and PHP, with Access and MySQL databases * Coverage of .NET Forms * Extensive online support, including fully operational, downloadable code and a gallery of working form examples

Forms are an integral part of many web sites, whether they are registration forms, feedback forms, or order forms.
