

# MILITARY RAILWAY EQUIPMENT

Operating a military railroad in a theater of operations requires the combined efforts of many people with various skills. Men are needed to run trains and repair railway equipment; others must maintain the right-of-way and the communications system. Before the railroad begins to operate, however, there is the tremendous task of planning the entire rail operation. One of the many things a planner must know about is what equipment is available to move military tonnages and who will maintain it to keep supplies and ammunition rolling to the front. That is the purpose of this subcourse; to introduce you to the kinds of equipment found in a military railroad and the characteristics of the knockdown fleet belonging to the Army.

US Army railroad course Military Railway Equipment TR0660 Army FMs Navy Training Manuals Learn how Marines really train The Air Force helps when The military use of railways derives from their ability to move troops or materiel rapidly and, less usually, on their use as a platform for military systems, like Special equipment includes specially designed rolling stock for handling unusual cargo and railway work equipment and ambulance cars.
