

Advanced Reports with Web Report Studio: Tutorials in SAS Business Intelligence (Volume 4)

Web Report Studio (WRS) is a powerful web based application that is an integral part of the SAS Business Intelligence (BI) Platform. The fourth in the series Tutorials in SAS Business Intelligence, this tutorial shows the reader how to create reporting applications with WRS. Using step by step instructions, it builds linked reports that are connected to each other in sophisticated ways. As sensitive data often has access restrictions, the tutorial also shows the reader how schedule reports and distribute them differentially. Because an information map is the preferred data source for WRS Reports, the tutorial also leads the user in building the information map. The sample data for the information map can be downloaded from the authors website at www.ace-cube.com. For an optimal learning experience, download the data, create the information map, and build the reports as you read along.

For a hardcopy book: No part of this publication may be reproduced, stored in a retrieval . Set Up a Second Deployment Instance of SAS Web Report Studio .
