

Mineralization in the British Isles

Each chapter in this up-to-date account of the metallogenic provinces of the British Isles is about a specific province and is written by authors active in the field. It provides a definitive account of British mineralization and its relationship with deposits worldwide.

Epigenetic mineralisation within the Isle of Man comprises a range of vein deposits (P916090). The most significant of these are Mineralization in the British Isles. R. A. Howie. Mineralogical Magazine December 1993 v. 57 no. 389 p. 759-760 DOI: 10.1180/minmag.1993.057.389.26 The first price and the ? and \$ price are net prices, subject to local VAT.
